VUONG TU LINH

Backend Developer

- Nationality Vietnamese
- Date of Birth 28 – 02 - 2002
- Sex Male
- Email vuonglinh280202@gmail.com
- Phone 0987514832

PROFESSIONAL SUMMARY

- **With 3 years of experience** in software development using **Java**, specializing in building and deploying enterprise management systems (ERP, CRM, HRM), news platforms and integrating 3rd party services.
- Proficient in **Spring Boot** and related modules such as Spring Data JPA, Spring Security, helping to build flexible, scalable and easy-to-maintain applications.
- Experience in developing systems based on **Monolithic, Mircroservices** architecture, capable of analyzing, separating services and designing effective APIs.
- Experienced in designing and optimizing databases.
- Having deployed many real projects using **Docker, CI/CD** , operating on Ubuntu and Windows Server environments.

WORK EXPERIENCE

08/2024 – Now	**Viettel Software** • Java Backend developer. • Develop, maintain, and deploy enterprise management applications
01/2024 - 08/2024	**AIT** • Java Backend developer. • Developed, maintained and deployed e-commerce applications and e-learning systems
09/2023 - 12/2023	**Viettel Telecom** • Java Backend developer. • Developed electronic invoice applications

TECHNICAL EXPERTISE

Primary Languages	Java (8+), SQL, Angular

Framework	Spring, Spring Boot, Spring Data JPA, Spring Security, Spring AI,…
DevOps	Docker, Kafka, CI/CD, Redis, Git
SQL	My SQL ,Mariadb, Postgresql, SQL Server,..
APIs	RESTful API, Soap, WebClient,…
Security	JWT, OAuth2, Spring Security, CSRF, CORS, …
Build Tools	Maven, Gradle, ...
Tools Test	Postman, Swagger

PROFESSIONAL EXPERIENCE

06/2026 - Now	**Project " Risk Management"** ● *Description:* **Risk Management** is a system designed to manage, monitor, and process operational risks. It supports risk registration, impact assessment, workflow approval, task assignment, action plan tracking, notification, reporting, and data analysis to help organizations control risks and improve decision-making. ● *Team Size*: 9 (2 Backend Developers) ● *My Responsibilities:* - Developed backend APIs for risk, task, action plan, and KRI management. - Implemented risk workflow processing, including approval, rejection, transfer, and risk acceptance. - Built permission, task assignment, import, validation, search, and pagination features.. *Technologies Used:* **Java 22, Spring Boot, Docker, Kafka, Redis, Mariadb....**
03/2026 - 06/2026	**Project " SME Lending Hub"** ● *Description:* **SME Lending Hub** is a digital lending platform designed to connect SME customers with financial institutions. It supports the end-to-end lending process, including loan application, customer and document verification, credit assessment, approval workflow, loan offer management, contract processing, disbursement, and status tracking. The platform integrates with multiple banking and financial services to streamline lending operations and improve the customer experience. ● *Team Size*: 6 (2 Backend Developers) ● *My Responsibilities:* - Developed backend APIs for the end-to-end **SME lending and loan origination process**, covering loan application, customer/business verification, document processing, credit assessment, credit approval, loan offer, contract, and disbursement.

	- Implemented **lending workflow orchestration and banking integrations** with VPBank, Techcombank, and VietCredit, handling authentication, customer/business verification, credit assessment, loan approval, document submission, and disbursement. - Built reliable financial transaction workflows with **validation, idempotency, retry, timeout, error handling, and application status synchronization** to ensure consistent processing between the lending platform and financial institutions. *Technologies Used:* **Java 11, Spring Boot, Docker, Redis, Mariadb....**
10/2025 – 03/2026	**Project "ISpectra"** ● *Description:* **iSpectra** is a radio frequency spectrum monitoring and analysis system that supports interference detection and signal analysis. This system is used by the Radio Frequency Department to manage spectrum usage and process data collected from radio frequency monitoring infrastructure. ● *Team Size*: 9 (2 Backend Developers) ● *My Responsibilities:* - Developed automated workflows for task creation and processing, improving operational efficiency. - Designed and implemented notification features for interference alerts, licensing, and antenna management. - Integrated telecom provider APIs to deliver real-time notifications on interference cluster status. - Optimized system communication using **WebSocket and Redis** for real-time data handling. *Technologies Used:* **Java 21, Spring Boot, Docker, Redis, Websocket, Mariadb....**
08/2025 – 10/2025	**Project "ViettelKitchen"** ● *Description:* Internal project **ViettelKitchen**, designed for Viettel employees. The system manages canteens, menus, and meal tickets, allowing users to select a canteen, choose a menu, place meal orders, make payments, gift or cancel meals. The system also generates statistics and sends notifications to administrators and kitchen managers. ● *Team Size*: 5 (2 Backend Developers) ● *My Responsibilities:* - Developed a feature to configure payment for each canteen. - Integrated payment functionality with ViettelMoney. - Integrated Single Sign-On (SSO) with Viettel Groups authentication system. - Implemented data synchronization of employee information from Viettel Groups SAP system. *Technologies Used:* **Java 21, Spring Boot, Docker, Kafka, Redis, Websocket, SOAP**, **Mariadb …**
08/2024 – 08/2025	**Project "Hành chính"** ● *Description:* An internal administrative and workflow management system for Viettel Telecom, supporting document processing, approval workflows, and internal operations.

	● *Team Size*: 6 (1 Backend Developers) ● *My Responsibilities:* - Developed modules for event management, medical workflows, and reporting systems. - Built configurable systems and automated SMS notification services. - Diagnosed and resolved production issues, ensuring system stability and high availability. - Implemented SSO authentication (OAuth2/JWT) to enhance system security. - *Technologies Used:* **Java 21, Spring Boot, Docker, Redis, SOAP**, **Mariadb …**
01/2024 – 08/2024	**Project "Vipo mall"** ● *Description:* A cross-border wholesale e-commerce platform developed by Viettel Post, connecting Vietnamese businesses with international suppliers and integrating the full order lifecycle from product search to payment and logistics. ● *Team Size*: 15 (3 Backend Developers) ● *My Responsibilities*: - Designed and developed the VIPO Seller platform, enabling merchants to manage storefronts and product catalogs. - Built RESTful APIs and integration services to synchronize order status and pricing data from external systems. - Processed high-volume order data using Kafka and Redis for real-time synchronization. - Technologies Used: **Java 17, Spring Boot, Redis, Kafka, Postgresql ...**
09/2023 - 12/2023	**Project "Sinvoice"** ● *Description:* A Viettel electronic invoice platform that supports enterprises in managing the full e-invoice lifecycle, from invoice creation, digital signing, issuance, and delivery to storage, search, reporting, and tax authority integration. ● *Team Size*: 10 ● *My Responsibilities*: - Developed scheduled cron jobs to periodically send information to the Information Security department. Supported fixing bugs on both Backend and Frontend, investigated root causes, and contributed to maintaining system stability. - Technologies Used: Java, Angular, Kafka, Jenkins, K8s, Postgresql,...
EDUCATION	
2020 - 2024	● HaNoi University Of Industry ● Major: Information technology
